### Improve the quality of life for the people of Africa 2

Despite the encouraging economic development enjoyed by many African countries during the last decade, many of them are still characterized by widespread poverty and inequality

## No Poverty Challenge ☆

Prepr

The global poverty rate has halved since 2000 and despite the trend leading downwards since it seems to be flattening out since 2016. Together, we can challenge poverty and the economic systems that allow it to remain. Regardless of the world being more prosperous than ever before, inequality and wage disparity is at an all-time high. Eradicating poverty is not a task of charity but a...

## Zero Hunger Challenge ☆

Prepr

Conflict and insecurity are the main drivers in 18 countries, where about 74 million people are in urgent need of assistance. Ending world hunger is a challenge that affects us all. Countries such as Yemen, Nigeria, The Democratic Republic of Congo, South Sudan, and Myanmar are some of the most affected by conflict, poli...

## Good Health and Well-Being Challenge ☆

Prepr

We are spending an astonishing amount of money, and exhausting exponential resources, treating illnesses that are easily preventable. Promoting and educating a healthy lifestyle, putting in place preventive measures, and modern healthcare is at the forefront of ensuring our future is a bright, healthy, and sustainable one.

## Challenge Brief

Your task is to redesign and reimagine a few key pages of the Prepr Network.

Create mock-ups/wireframes using UI/UX designing tools (eg. Adobe XD, Sketch, Figma) of the following pages:

Explore page (<https://preprlabs.org/>)

Projects page (<https://preprlabs.org/myProjects>)

Challenges page (<https://preprlabs.org/list/challenge>)

Challenge details page (<https://preprlabs.org/challengeManager/ux-designer-work-challenge>)

Labs page (<https://preprlabs.org/joinedLab>)

Do not be restrained by the current design and layout of the pages. However, do ensure that pages can perform their respective functions. Feel free to add and remove details and design anything that you believe will result in the best user experience. For example, in the explore page, each challenge card can contain more information than just the description.

### Submission Process:

Please begin by creating a Project, where you can upload videos and documents of your designs. Please name all of your files and documents using the following convention: John\_Smith\_UX\_Designer\_Nameofyourfile. Once your project is completed, you will be able to submit it here to the Work Challenge.

### Evaluation Criteria:

25% on your approach to tackling the problem and the steps you took to get to your solution and final deliverable

25% on how well you used various tools & processes to tackle the challenge

50% on the final solution and output of your challenge

## UX Designer Work Challenge

Assigned: March 15, 2020

Due: March 18, 2020

Hi! I was wondering if we are allowed to submit the challenge as a Figma file or would you like a specific format. Please let me know, Thanks :)

Hello, yes you can submit as a Figma file - please also provide an export in the form of a PDF or image file! Thank you.

Omarrashid

Please create a project first, then you will be able to submit.

DCift

20 hours ago

The Explore and Challenge pages are the same currently... should we honour that in our re-design? Or are we allowed to iterate?

## **Prepr Process Notes**

### **Home**

When I began the mockups, the first page I began work on was the homepage, which I would use to establish the overall aesthetic. I find Prepr's colour scheme simple and clean, so I didn't change it. However, I redid the nav bar with links to pages which I believed were relevant. Everything that wasn't included, I believe doesn't need a button to go to it. The icons I used were downloaded from Google images and recoloured to white in Photoshop. I removed the additional button to swap between challenges, labs, and projects, because that option was already on the nav bar. Finally, I changed the layout of the page to a thumbnail gallery of the projects, because I feel that the thumbnails say enough about the projects and it would get rid of the page navigation at the bottom of the page.

### **Projects**

I added more options to edit multiple projects, because the way it is now, the user must click to view the project, then click once more to edit it. I also made it possible to delete and select multiple projects. I also made the panels for each project smaller to allow more to fit on the screen.

### **Challenges**

For this page, I sheared off all of the search criteria except the search bar, which I moved to a more central spot, with the submissions and following buttons flanking it on either side. I did this because when people go into the challenges section, they usually already know what they are looking for, they don't need criteria to help narrow down their selection. I also took out popular categories because it serves no purpose.

## **Challenge Details Page**

Rather than have all the details spread into four different sections, I put all of the content on one page, making it easier to read and digest. I removed Submissions because there is no point of having it if the average user can't view them. On an administrator profile, they would have access to the submissions. I also removed Host and More Challenges because it is useless filler.

## **Labs**

I changed this page the least, because it was the most optimized. The filters are necessary in this case, because there of the sheer amount of labs that there are. I took out the categories again because nobody uses those and shifted around the buttons for a simpler, easier interface.
